ROLLS-ROYCE SETS NEW CORPORATECARE® RECORD

Rolls-Royce, the world's leading provider of engines for business jets, today announced that it set a new record for CorporateCare® in 2007 with 194 engine maintenance management contracts.

More than 700 corporate aircraft are now under Rolls-Royce engine management programs, covering the BR710, AE3007, Tay and Viper-powered aircraft. In addition, more than 50 per cent of all current production business aircraft engines are covered by CorporateCare, including more than 75 per cent of the AE3007 corporate jet fleet.

CorporateCare is the most comprehensive engine care program in corporate aviation. It is a fixed-cost engine maintenance management plan based on hours flown and comprises a range of high-value services, including engine management; asset and logistics services, as well as engine repair and overhaul visits.

Douglas Cribbes, Senior Vice President, Aftermarket Services, Corporate & Regional Aircraft, Rolls-Royce said: *"CorporateCare gives true value to operators of Rolls-Royce powered corporate aircraft because they gain unique technical expertise and services available only from the company that designed and built the engine."*

"With CorporateCare now in its sixth year, owners are realising the benefits of the program. These include predictability, increased aircraft resale value and liquidity, prolonged product life and optimized engine performance."

"In addition, when the aircraft is sold, CorporateCare enrollment is transferred at no cost to the buyer," added Cribbes.

NOTE TO EDITORS:

1. Further details on CorporateCare are available at www.rolls-royce.com or contact Steve Friedrich, Director of Aftermarket Business at +1(703) 621-2715.
2. Through CorporateCare, operators benefit from a global framework of engine management services and technical support. Regional Customer Managers along with global field service representatives are available 24/7.
3. The latest generation of engine health monitoring services collect data from the aircraft worldwide and any required alerts are sent to the operator and the Rolls-Royce Operations Center for action.

4. Rolls-Royce is working hard to improve the environmental impact of its products. Each year Rolls-Royce, in collaboration with its partners, invests around £820 million on research and development, two thirds of which has the objective of reducing the environmental impact of its products. The primary technology investment area is aimed at reducing noise and emissions.
5. Rolls-Royce, a world-leading provider of power systems and services for use on land, at sea and in the air, operates in four global markets – civil aerospace, defence aerospace, marine and energy. The Group has a broad customer base comprising 600 airlines, 4,000 corporate and utility aircraft operators, 160 armed forces, more than 2,000 marine customers and energy customers in 120 countries.
